

**Hoarding Master** is delighted to be able to offer the only precision-engineered, site specific hoarding available on the market.

Each component of our complete system has been individually engineered and designed to ensure our hoarding outlasts traditional methods. In addition to proving a safe and secure site perimeter, our Steel and Aluminium hoarding creates a professional looking boundary to any project. Based in Peterborough, our team of experienced engineers and designers work closely with our Clients to ensure Hoarding Master continue to provide the most efficient solutions.

Hoarding Master are a highly driven company who understand the needs and expectations of the construction industry and our Clients. As part of the JRL Group we are proud to deliver quality solutions whilst never compromising on Health and Safety.

"Our Steel and Aluminium system outlasts traditional wooden alternatives and without any degradation in performance".

Our team of experienced engineers and designers take great care to calculate loadings and ground conditions when designing our reusable, metal hoarding system.

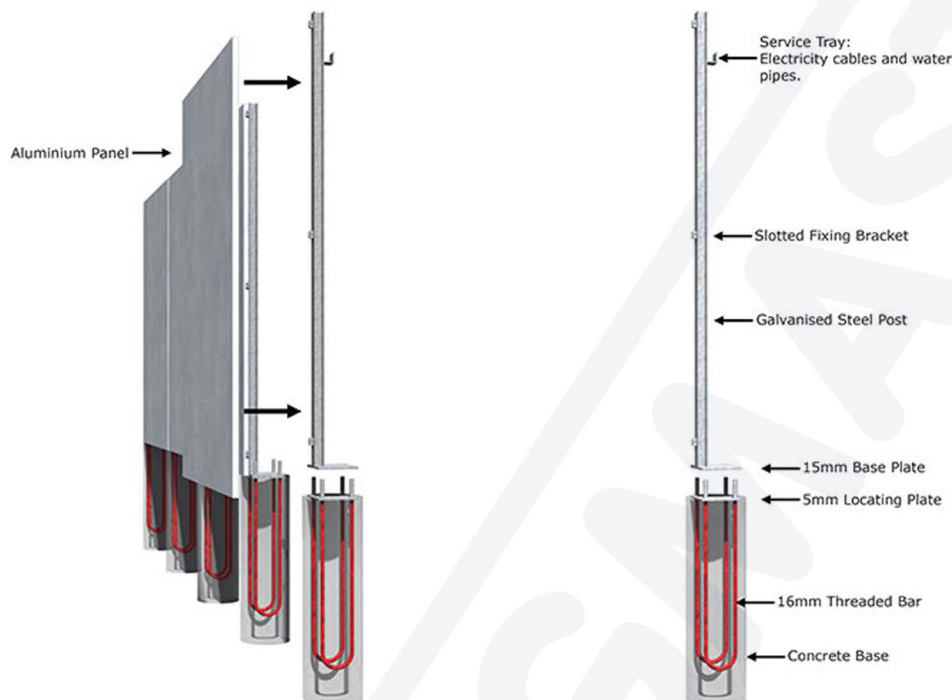

Our modular system has been designed to permit safe and efficient installation and removal. The Aluminium panels are easily fastened securely to Steel posts allowing large areas to be protected quickly. Our system is equally ideal for smaller sites and can be utilised in areas of limited space and tight corners. Hoarding Master is adaptable to any site boundary including, flat, sloping and curved.

Our components are also able to safely carry services using a simple bracket system. Powercables, water pipes and other services can be securely attached to the panels and posts, thus eliminating the inherent safety risks associated.

Throughout the lifecycle of a construction project, traditional wooden hoarding, exposed to the elements, can degrade and can become a liability. Our Steel and Aluminium system outlasts traditional wooden alternatives without any degradation in performance or safety standards.

## Re-usable Foundations

- ★ We have devised a screw pile foundation system for the Hoarding Master uprights which is also 100% re-useable.
- ★ The screw pile is fully designed and tested to meet all the relevant loading requirements is installed in minutes and is fully reusable.
- ★ The screw pile is fully designed and tested to meet all the relevant loading requirements is installed in minutes and is fully reusable.

### Among the benefits are:

- A. 100% re-useable
- B. Little or no arising's from installation
- C. Easily installed with our proprietary installation system/setting out templates
- D. No wet/concrete required
- E. Probing system to identify services
- F. Offset bases available to maximize site areas and avoid services.
- G. Easily removed leaving only a 75mm hole in the ground to be repaired.
- H. Your site logo's/livery can easily be printed on our Aluminum panels direct from our factory. This can be re-done easily when you re-erect your Hoarding Master on the next job.

### Benefits at Hoarding Master

Comparing Hoarding Master to traditional hoarding is not a like for like comparison. Hoarding Master, due to the fact it is constructed from galvanized Steel and Aluminium can last up to twenty years when handled correctly.

For this example, a 10 year life expectancy will be assumed for Hoarding Master.

During the assumed 10 year period, traditional hoarding would need to be replaced approximately 5 times at a repeat cost. There is also a need to dispose of the contaminated timber and ply often at a considerable cost.

In order to compare the cost of a Hoarding Master system with traditional, it is more realistic to multiple the cost of a timber and ply system by a factor of 5.

Hoarding Master will be classed as plant on your balance sheet making it an asset to your business and not a consumable like traditional hoarding.

If you are in the construction business for the long haul, Hoarding Master is the only way to go.

*Please do not hesitate to contact our team of engineers to discuss how Hoarding Master can provide you, and your Clients, with a bespoke hoarding system.*
